The Gripper

Fully Automatic Digital Tire Inflator.

The Gripper Tire Inflator is a fully automatic, digital system. Designed to inflate all types of tires, it is the most advanced tire inflator on the market and is fast, strong, durable and incredibly accurate.

The Gripper

Available in three models.

The Gripper comes in three different models. From a standard model that simply inflates and deflates tires, to the Gripper Tire Centre, which offers three unique programmes. You can see the specifics of each model below.

1

Gripper Speedy

One Programme Mode

Program Mode P0

Standard Program (inflates or deflates the tire to preset level).

2

Gripper Professional

Two Programme Modes

Program Mode P0

Standard Program (inflates or deflates the tire to preset level).

Program Mode P4

Nitrogen Program (conversion AIR to N2, used to flush the AIR from a tire to convert it to a N2 filled tire, automatically).

3

Gripper Professional Pkus

Three Programme Modes

Program Mode P0

Standard Program (inflates or deflates the tire to preset level).

Program Mode P1

Over Pressure Program (inflates directly to a high pressure value and deflates the tire to a preset level).

Program Mode P2

Nitrogen Program (conversion AIR to N2, used to flush the AIR from a tire to convert it to a N2 filled tire, automatically).

GRIPPER
Tire Inflator

I wanted a quality tire inflator that would have the ability to adjust air pressure in four tires at once. The Gripper does just that. I no longer need to use hand held tire gauges to adjust air pressure and I save the expense of replacing each hand held air gauge because The Gripper always works and is always accurate.

I've had a number of tire inflators installed in the past 10 years, in many locations, and have yet to find a problem! I would recommend the Gripper to anyone looking to purchase a permanent electronic tire inflator; these are quality tire inflators and will improve your service.

Introducing the **Gripper Compressor Cabinet.**

The Gripper Compressor cabinet has been designed to operate in areas where air cannot be provided. With a built-in compressor, suited to either small vehicles or large HGV's, it utilises a fixed hose to limit mechanical failure, and multiple end hose options suitable for any tire. The cabinet size is: Width 378mm, Depth 379mm, Height 1151mm.

- Designed and manufactured in the UK.
- Oil Free, maintenance free compressor.
- Continuously rated, so no cool down period.
- Low noise compressor, mounted with antivibration components.
- Fast and accurate inflation.
- Easy to use.
- Simple installation - no external air feed required.
- Robust components to reduce life cycle costs.
- Stainless steel cabinet.
- Audible end of fill signal.

The Gripper

Specs & Features.

Car/Small Vehicle

- Max 4 bar
- Power Supply: 90–240 VAC (+/- 10%), 50/60 Hz
- Consumption: 16 W
- Operating Temperature: -20 to +70 °C
- Weight: 2.1kg
- Max Air Line Pressure: 16.0 bar (232 psi, 1600 kPa)
- Degree of Protection: IP66

HGV

- Max 10 bar
- Power Supply: 90–240 VAC (+/- 10%), 50/60 Hz
- Consumption: 16 W
- Operating Temperature: -20 to +70 °C
- Weight: 2.1kg
- Max Air Line Pressure: 16.0 bar (232 psi, 1600 kPa)
- Degree of Protection: IP66

Key Details

- Made of High Grade Synthetic Composite.
- User friendly, fast, accurate and flexible.
- Backlit LCD to display pressure readings (choice: BAR, PSI, or kPa).
- Automatic 6 second calibration (Accuracy: 0,01 BAR = 0,15 PSI = 1 kPa).
- Built-in heater for all weather conditions with low power consumption (16 W).
- Hermetic design for indoor or outdoor use.
- Degree of Protection: IP66.
- Automatic power supply detection, works worldwide (90–240 VAC), 50–60Hz.
- Vandalism resistant (unbreakable).
- Heavy duty microswitch keyboard, without moving parts, lifespan – 10 million operations.

Boost Bay Efficiency and Build Customer Loyalty with One Smart Upgrade.

In today's competitive environment, finding ways to increase efficiency, grow revenue, and retain loyal customers is essential to staying ahead. Surprisingly, one often overlooked service can support all of these goals: tire inflation. By upgrading your bay with a tool like the Gripper Tire Inflator, you can turn a simple task into a valuable source of profit and customer satisfaction.

Maximise Bay Efficiency and Throughput

Every second matters in a busy bay. The Gripper Tire Inflator is designed to speed up one of the most common but time-consuming tasks in your workflow. Its ergonomic, one-handed design allows your technicians to check and adjust tire pressure without juggling tools or struggling with valve stems. This helps reduce delays and allows more vehicles to be serviced in less time.

By making tire checks faster and easier, the Gripper helps eliminate common bottlenecks. A smoother workflow means improved labour productivity and greater overall throughput, without compromising service quality.

Add Hidden Revenue with Every Visit

While often provided as a courtesy, tire inflation can become a profitable part of your service offering. When positioned correctly, customers see it as a value-added feature worth paying for. Including quick, accurate tire pressure checks in your maintenance package enhances the customer experience and justifies a higher service price.

It also creates more opportunities for upselling. Underinflated tires might point to slow leaks, worn valves, or other issues that require attention. With the precision offered by the Gripper, your team can spot these problems early and recommend appropriate follow-up services.

Keep Customers Coming Back

Modern drivers are looking for more than speed. They want confidence that their vehicle is being properly looked after. Regular tire pressure checks show that you care about safety, fuel efficiency, and long-term tire performance.

Offering this as part of your standard service builds trust and keeps customers returning. The Gripper Tire Inflator allows you to deliver this benefit quickly and consistently, which means your customers get added value without extended wait times.

The Right Tool for the Job

The Gripper Tire Inflator is made for fast-paced service bays. Its tough construction holds up to constant use, and its one-handed operation improves technician comfort and efficiency.

If you're aiming to boost daily output, unlock new revenue opportunities, and give customers a better reason to choose your shop again, upgrading your tire inflation process is a smart and simple step that delivers real results.
